

# Plan a City

Use this space to plan a city that includes homes for 500 people (an average of 4 people per home). In your plans include roads, homes, shopping areas, parks or open space and schools.

# Energizer

How would you capture the energy in a wave or a ray of sun or the wind? Design something that would capture an unlimited form of energy. Use this space to show how it would work.

# Modern Day Midden

A midden is a place where Native Americans would throw their garbage. When archaeologists sift through these ancient garbage dumps they usually find animal bones and sea shells. Imagine that you are a archeologist five hundred years from now. You uncover a garbage dump that was closed in the year 2000. Draw what you would find in this modern day midden, remembering what things would have disintegrated and what things would still be intact.

If this is all archaeologists know about our society, what might they say about it?

## Endangered Stamp

Design a commemorative stamp to honor an extinct or endangered species of animal.

Write a short paragraph explaining why this animal should be honored with a stamp.
